

ic Blockchain

International Consortium for Blockchain

www.icblockchain.com

- ✓ Community-driven organization that consists of pioneers, experts, and trusted advisers.
- ✓ Headquartered in the United States.
- ✓ Not just another certification body but it changes the way people approach and implement Blockchain.

Our approach is not tied to any specific Blockchain platform, thus giving people the flexibility to implement any platform in a way that makes sense for their context and organization.

Help organizations understand the power of Blockchain and its potential use-cases by providing learning journeys that equip people first with foundation knowledge on Cryptocurrency and Blockchain, then guide them along a path towards mastery in their chosen discipline, and eventually becoming an expert in their domain.

Certification and accreditation body, not a training company:

- *Help organizations and training providers design learning experiences that cultivate Blockchain applications and use-cases.*
- *Provide world-class learning tracks to guide organizations in the development of their curriculum.*

- ICB works with course providers to accredit new or existing courses against proven learning objectives.
- In turn, these courses can be offered to individuals and organizations for professional-level certifications.

We are the only Consortium in Blockchain that is based on industry standards, scales globally, and is maintained by and for the community. Our Certification are issued on the blockchain and can be easily verified.

What We Represent

We are an accreditation body for Blockchain knowledge. We collaborate with worldwide blockchain experts to develop learning tracks to foster mastery and expertise.

How We Work

We work with Registered Education Partners (R.E.P) to accredit courses and instructors against our industry driven learning objectives.

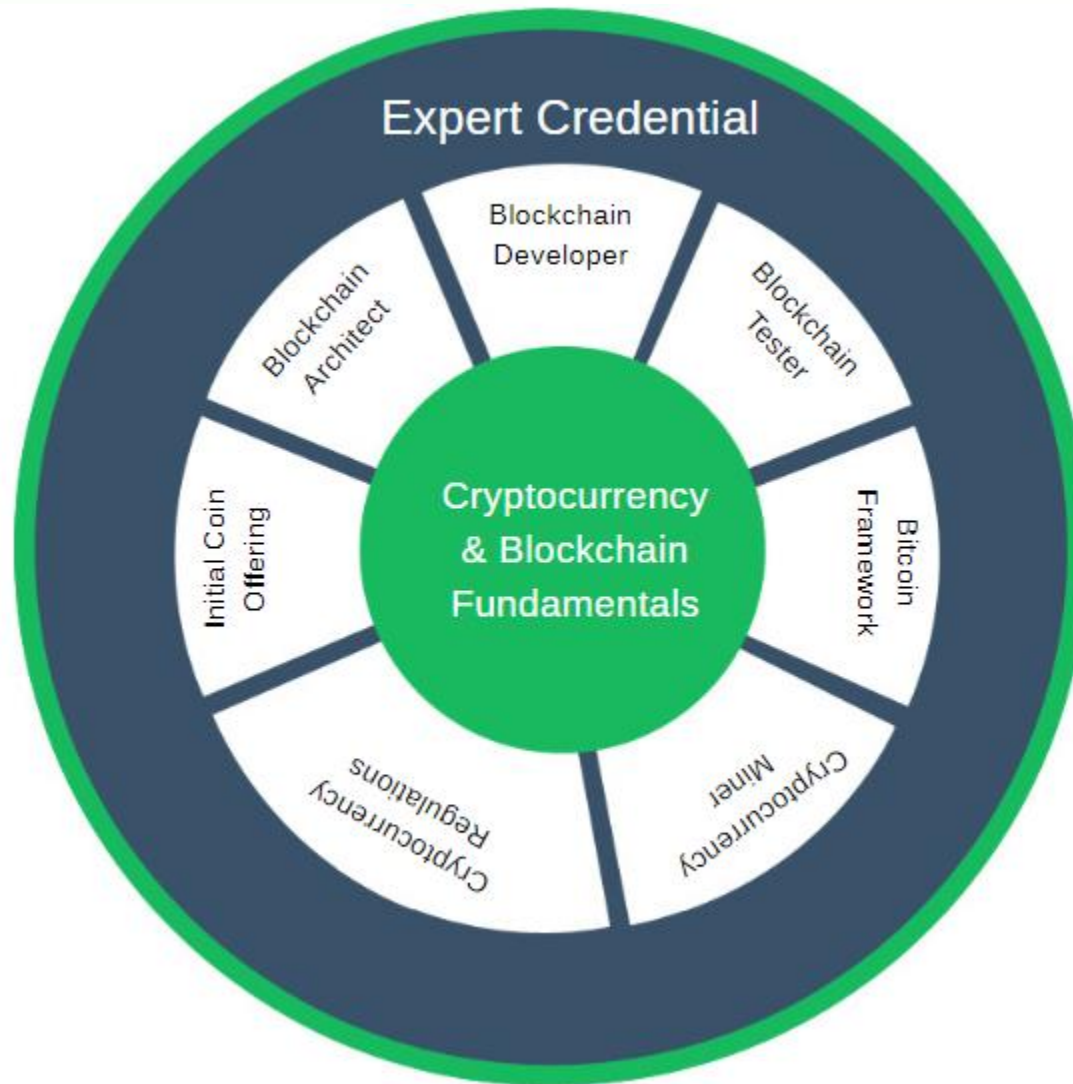

Transparency

All Certifications we issue will be facilitated via Smart Contracts on the Ethereum blockchain and will provide Proof-of-Authenticity and Existence.

Learning Roadmap Overview

- This track equips participants with the foundations of Cryptocurrencies and the underlying Blockchain technology.
- It's learning objectives will foster discussion enabling participants gain useful knowledge and insight to Cryptocurrencies and Blockchain technology.

- This track equips participants with the latest tools and techniques to architect applications which integrate Blockchain technologies, with the master course emphasizing the use of cloud storage as a participating node.
- Courses discuss blockchain integrated network platforms, transaction design, transaction validation and node creation.

- This track equips participants with the latest tools and techniques to develop applications featuring integrated Blockchain technologies.
- Courses also discuss cryptographic techniques enabling participants to apply Blockchain Technology to their professional area of expertise and understand privacy aspects, when to use Blockchain, and how the integrated network operates.

- This track equips participants with the latest tools and techniques to test applications featuring integrated Blockchain technologies with the master course emphasizing the popular tools Ethereum and Hyperledger Fabric.
- Courses discuss cryptography technology, test planning, testing integrated network platforms, transaction validation, and non-functional testing.

- This track equips participants with the latest tools and techniques to implement applications featuring integrated Bitcoin protocol and networks.
- The courses also discuss cryptography and blockchain technology, which enables participants to apply the technology to their professional area of expertise and understand privacy aspects, double-spending, and other issues that relate to the currency.

- This track equips participants with the latest tools and techniques to develop a profitable cryptocurrency mining practice utilizing the most efficient software and hardware setup.
- Courses also discuss cryptography and blockchain technology, which enables participants understand privacy aspects, and how the integrated network operates.

- This track equips participants with the latest understanding of the regulatory environment surrounding the virtual currency market.
- Cutting-edge businesses use emerging cryptocurrency markets including initial offerings and currency mining to fund their startup ventures and more, while laws and regulations in the US and beyond catch up to the new technology.

- Courses on this track enables participants to apply Cryptocurrency technology to fund their development projects and understand risks including legal aspects, when to use an Initial Coin Offering, and how the cryptocurrency market operates.

- ICB also offers a competency-based expert certification program.
- The Certified Cryptocurrency and Blockchain Expert credentials are extremely prestigious and are only awarded to individuals who demonstrate competence in a given track via a rigorous review process in front of a panel of industry-recognized experts.

Registered Education Partner

- IC Blockchain helps Registered Education Partners (R.E.P) take their students on a learning path that leads to mastery and eventually becoming an expert.
- We do this by working with other known experts in the community to form learning objectives for each track and competency level.
- These experts ensure and verify the courses being offered by R.E.Ps meet the highest standard of learning.

- As an accreditation body made up of leading Blockchain and Cryptocurrency experts, we accredit Blockchain and Cryptocurrency related courses against proven, discipline-specific learning objectives.
- These learning objectives are built into a Learning Roadmap that covers multiple disciplines.

- Trainers can be accredited during the R.E.P course review or added to the course at a later time via separate session.
- When the Trainer becomes accredited, they will receive an ICB account, trainer certification for that course, and a digital badge that they can publish to social media.
- The trainer will also have access to setup their courses, register students they train, and can affiliate with multiple R.E.Ps for different courses

- Registered Education Partners (R.E.Ps) can accredit their courses with ICB to ensure training materials meet proven learning objectives which were established by Blockchain and Cryptocurrency experts.
- Following the accreditation, R.E.Ps can offer ICB accredited courses in both public and private settings for fundamental, professional, and master level certifications.
- All courses are classroom courses.
